

PS Change Manager

The electronic management of change (MOC) solution that helps you streamline change - and your business

Managing critical change in chemical plants and refineries has always been a complicated task. But in a time of increased reporting, heightened regulatory scrutiny and a multitude of strict compliance mandates, anything less than a robust, automated MOC system can throw a wrench in your work processes and put your entire operation and, most of all, your plant safety at risk.

Introducing PS Change Manager

This advanced Web-based solution tracks management of change (MOC) recommendations from any source, anywhere – from input to closure – for greater visibility, consistency, accountability and control.

Enhanced audit reporting capabilities assist you in creating a clear, auditable trail that helps you not only to ensure critical elements of regulatory compliance but also to be certain that potential risks from process or plant modification are addressed. Better still, it maintains critical documentation that may be used later to compare MOC drivers and make more informed strategic business decisions.

Using PS Change Manager as the foundation for a systematic, ongoing MOC process produces measurable benefits. PS Change Manager drives strict accountability and maximum efficiency, helps minimize cost and improve safety over time.

Streamline the MOC process and your operations

This easy-to-use, Web-based automated system is equipped with step-by-step data entry procedures that walk you through the MOC process and preset approval requirements that ensure each phase of your MOC process is implemented. Even temporary MOCs aren't a problem; PS Change Manager tracks them with the same rigor as a traditional MOC.

User-friendly online viewing tools enable users and business managers to monitor MOC status in real time and manage changes collaboratively.

Standardized checklists drive consistency

PS Change Manager adds an additional layer of safety by regimenting steps required for the thorough evaluation of change by associating risk level to approval requirements. It also drives consistency in the technical review of the change by using standardized checklists to perform engineering, safety, health and environmental reviews.

Keep on track with e-mail alerts

PS Change Manager also works with your e-mail system to routinely notify process holders of assignments and impending deadlines, making sure that changes stay on track.

Once you've finished the process, PS Change Manager greatly simplifies closeout, enabling you to quickly verify sign-offs to make sure they are complete.

PS Change Manager is more than a system for streamlining and optimizing your management of change workflow. It can also help optimize your business operations – boosting productivity, increasing plant runtime and profitability, and ensuring a safe and healthy environment for your employees.

Leverage our experience

With PS Change Manager you have the support of some of the most knowledgeable MOC experts in the business. Siemens has successfully deployed more than 30 electronic MOC solutions at some of the world's largest and most advanced refineries and chemical plants. Siemens brings our full depth and breadth of experience to your operation, creating an effective, efficient management of change solution that's designed for your business.

Powerful new features

Building on our successful eMOC application and industry experience, PS Change Manager delivers new feature enhancements and functionalities for greater speed, scalability, ease-of-use, reporting and analysis, including:

- Advanced configuration tools for rapid deployment
- Highly scalable platform – plant-wide or for multiple plants in a network
- Workflows configurable by site or network give you the ability to customize to meet diverse and changing business requirements
- Configurable approvers, checklists and risk levels for greater flexibility and ease of use
- Built-in user-friendly, step-by-step MOC process that promotes best-in-class IT protocols
- Automated capture of AFE numbers, equipment IDs and work orders for greater visibility
- E-mail alerts of assignments and deadlines ensure that changes stay on track
- Configurable dashboard so users see only the data that is relevant to them

- Advanced search capabilities provide insight into change history and aid troubleshooting
- Enhanced reporting capabilities for improved tracking, oversight and data analysis
- Easy to export data and reports for analysis and presentation
- Reassignment capabilities make it easy to adapt to organizational changes
- Ability to attach any type of document, picture or drawing for supplemental and supporting documentation
