 NEW PRODUCT INNOVATION AWARD

Siemens AG Receives Frost & Sullivan's 2015 European Industrial Steam Turbine New Product Innovation Award

Frost & Sullivan honors Siemens AG with its 2015 European New Product Innovation Award for the company's innovative and continually expanding product line portfolio.

Siemens' Steam Turbines are customized and designed for the specific needs of the customer. In close cooperation with the customer, the Siemens team evaluates all customer conditions and demands; only then a steam turbine is designed. Siemens also has the largest installed service base in the world for industrial steam turbines. Unlike other competitors who have no local service or manufacturing base, Siemens has installed manufacturing and service centers at key locations around the world, which leads to shorter delivery and service time for steam turbine and other industrial equipment.

“Siemens has established itself as the world leader in industrial machines, backed by its decades of experience and a dedicated focus on product quality.”
